

Thanks for buying the Ecommerce Quickstart program from Online Store Help. You are well on your way to getting your store up and going. I am able to give great pricing on the QuickStart program because I give you a series of Home Work assignments to finish before we sit down and complete your website. Some of these items you might have already done or already have, that's ok, just check them off. But since I deal with both new companies and established businesses, I have to include everything.

The beauty of this program is not only is your site up and going quickly, but you get to see how to manage your site quickly and efficiently.

Before you can schedule our session, you will need to email me the check list with everything checked off and ready to go. This is how I am able to provide the service so cheap. If we start the build out and I find that items are missing, I will have to charge you additional to finish the project.

Upload all your photos, descriptions, pages and a list of user name and passwords you will need to get the site up and going. If you are comfortable copying API information you can do that as well. I will show you how to share it when we are ready to complete.
